

## Using PDF.

**PALLETMANAGER / CARGOMANAGER / SLIPSHEET MANAGER** can output reports in a variety of formats using either inbuilt routines or by making use of 3rd party software.

For example PALLETMANAGER can output .JPG graphics reports using inbuilt routines and in doing so produce a Webbase of specifications which can be accessed by others using their web browser. Microsoft also provide Word users with an XPS Document Writer format to which reports can be output.

Probably the most popular format is PDF and we have for many years recommended users utilise a product such as the Broadgun PDF software – pdfmachine White (a free download from [www.pdfmachine.com](http://www.pdfmachine.com) ). Other products we have used include PrimoPDF as well (of course) as the true Adobe output products.

In all instances the PDF programs appear as an additional printer on your printers list and you can then select the appropriate printer and output to file the appropriate PDF information.
